# Tempest

Tempest is a unique staffing and scheduling solution for temporary workforces, optimising and improving organization of business, employees, workflow and management.

Work

Branding + Mobile App + Web app

Logo creation

The project began from scratch, which meant that we also had to work on the Branding. The name was established as "Tempest", and that was the starting point for the Logo and color palette. Also, the initial concept for the app was also to make it as easy as a Chat app layout, which almost everyone is used to, now. Putting these two together shaped the logo mark.

Incoming cards + Letter "T" = Final Version

Wireframing
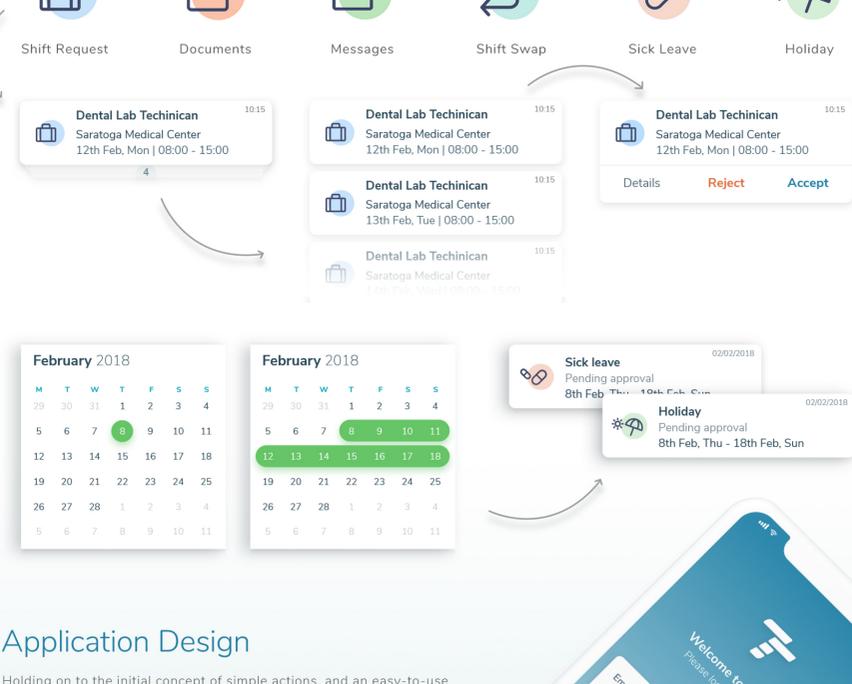

Starting with the User Flows, we worked on sketching diagrams of all possible actions initially thought out.

Afterwards, we worked on the Wireframes based on those User Flows, and reworked or added missing features and options.

In parallel, we also worked on the Web Portal wireframes.

User Interface Elements

Given the wide variety of users and professions that our app will serve, the main design approach was an open friendly use of colors, and a user interface which is easily readable and understandable.
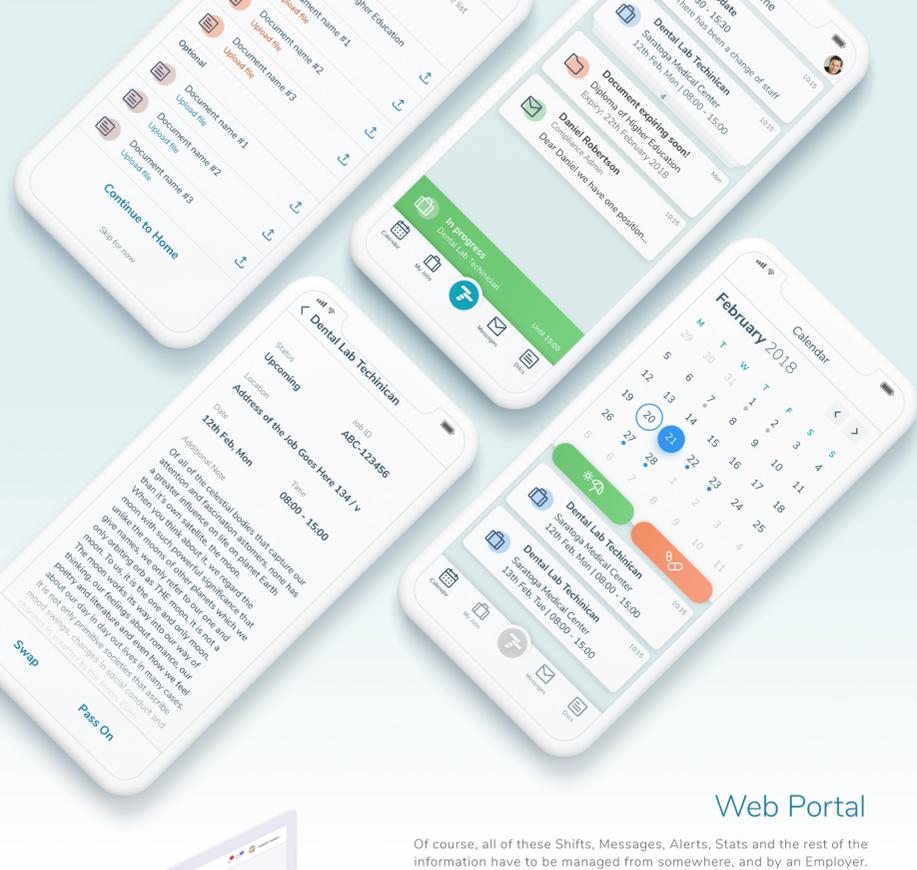

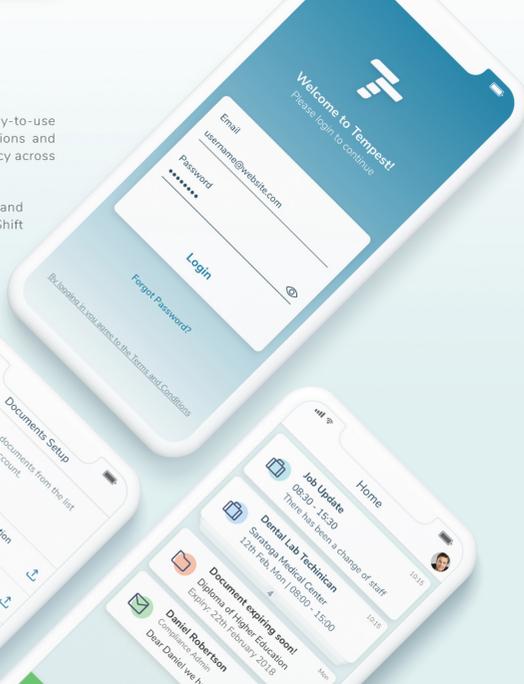

Shift Request   Documents   Messages   Shift Swap   Sick Leave   Holiday

Application Design

Holding on to the initial concept of simple actions, and an easy-to-use and clean interface, the design then spread across all sections and features of the app, keeping the same direction and consistency across all screens.

From the Login page, through setting up the Worker Profile and landing on the Home page, where all notifications -, like Shift Requests, Updates, Alerts and Messages, will be displayed.

Also through viewing Shift or Alert details, taking needed actions, or simply managing your vacant days.

Web Portal

Of course, all of these Shifts, Messages, Alerts, Stats and the rest of the information have to be managed from somewhere, and by an Employer.

That is where the Web Portal comes into place. A very complex set of screens and features, designed specially for the Employer that allows everything from the initial Company Setup with Shift times, Shift Rates, Locations, Job types, Hierarchy,, etc., through posting Shifts, approving shift passing on, or swapping, approving vacancies,...

All of that can be found in the Tempest Company Portal.
